

pharma704

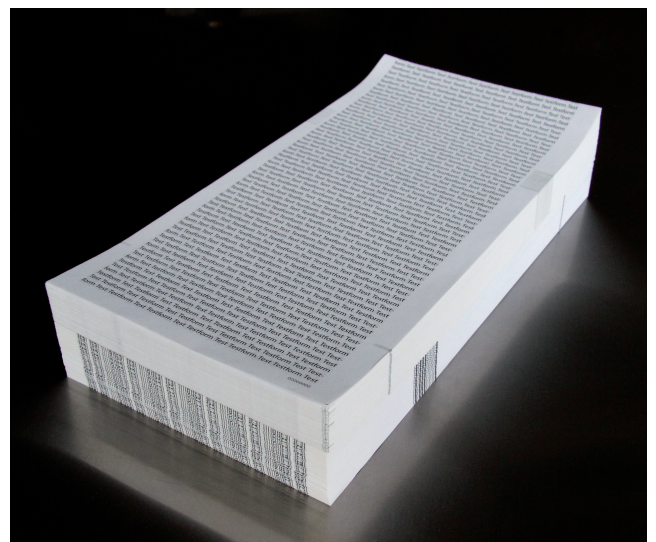

Is a special delivery for the classic pre-folded products.

Designed for the thin paper print, in the weight range between 38 gr - 50 gr.

The pharma704 is only available in the 4 up version and can process 1, 2, 3 and 4 up production.

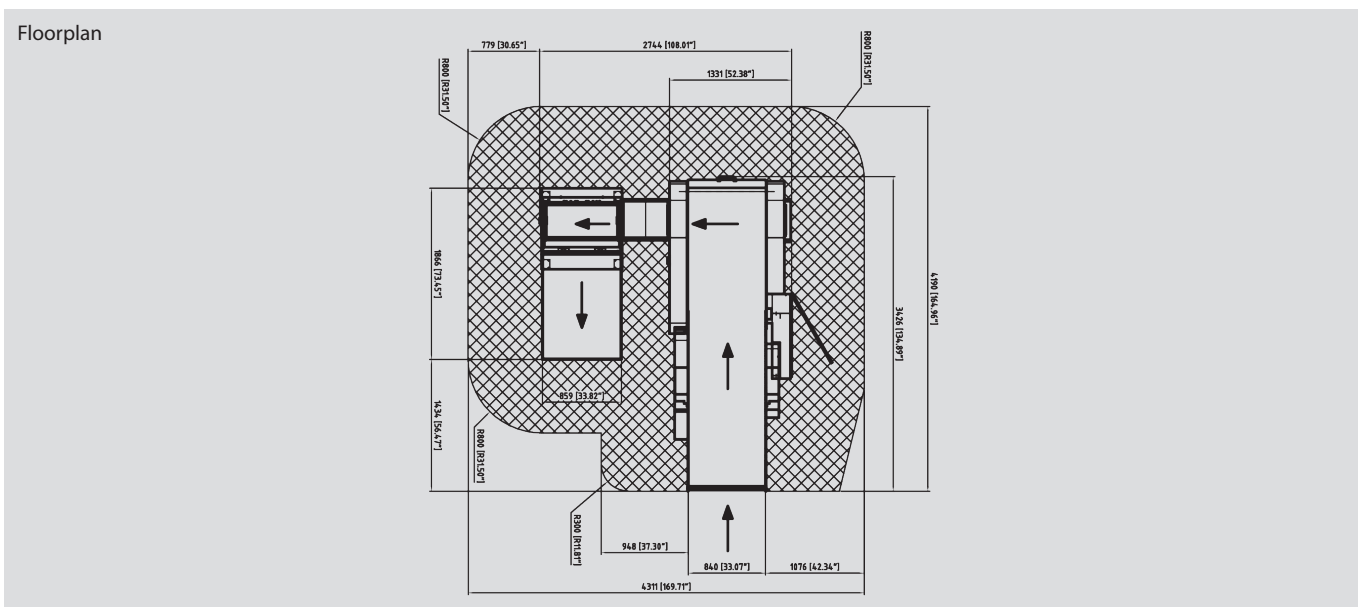

The most time-consuming step in the production of pharmaceutical pre-folds is the jogging of the stacks. A very high degree of skill and experience of the operator is necessary to receive good quality stacks. The stack count is usually 250 or 500. By the pharma704 the operator skills and operator handling are reduced to an absolute minimum. The operator gets a stack which is perfectly jogged.

pharma704 standard configuration

- Pharma-Infeed, electrical high adjustment
- Antistatic device
- Pharma pressing station (precision polished)
- Adjustable motor driven level compensator
- Automatic setup in running direction (in the magazine area)
- Jogging plates in various length
- Additional control element on the package table
- Additional control element at the infeed section
- Panorama mirror
